

Nemesis Acceptance Course

BIOL 100 · Autumn 2026 · Acceptance revision A1

Course Schedule

The following dates are fixed and will not move.

Exam 1: September 12, 2026 at 9:00 AM

Assignment 1 due September 18, 2026 at 11:59 PM

A makeup session may be rescheduled if enough students ask.

The departmental colloquium is usually held in spring.

Key Terms

Learn these three terms and what each one does.

Term	Definition
Photosynthesis	Conversion of light energy into chemical energy stored as sugar.
Chlorophyll	Pigment that absorbs light, mostly in the blue and red wavelengths.
Stomata	Pores in a leaf surface that let carbon dioxide in and water vapour out.

Cause and Effect

Light intensity

Increasing light intensity increases the rate of photosynthesis until another factor becomes limiting. Once carbon dioxide or temperature becomes the constraint, adding more light produces no further increase.

Laboratory Notes

Bring the following to every session:

- A bound notebook
- Safety goggles
- The pre-lab worksheet, completed

Figure 1 — rate of photosynthesis against light intensity

Figure 1. The curve rises steeply, then flattens once another factor limits it.
